

Region 3 GPRA Baseline RCRA Corrective Action Facility

BFI - Solley Road

**Solley Road
Glen Burnie, MD 21061
Congressional District 2
EPA ID #: MDD000797365
Last Updated 6/16/2005**

Current Progress at the Site

This facility is one of EPA Region III's high priority RCRA corrective action sites and EPA has determined that both the Human Exposure and Groundwater Environmental Indicators have been met.

In July 1991, EPA issued a Corrective Action Permit to BFI to conduct investigations, perform interim measures and monitor the contamination associated with the facility. EPA, the State of Maryland (MDE) and the facility have worked jointly to complete the requirements of the permit which required BFI to complete the Verification Investigation and RCRA Facility Investigations to document that Volatile Organic compounds (VOCs) was a concern to the groundwater and air media. Also, BFI implemented, and is currently operating and monitoring numerous stabilizations/interim measures which include a ground water recovery and treatment system, an active landfill gas extraction system, and the construction of a state-of-the-art landfill cap.

Monitoring of the ground water recovery and treatment system continues to occur. BFI has expressed interest in pursuing other technologies to expedite the clean-up process. On December 3, 2002, EPA and MDE approved a Pilot Study Work Plan to expedite the groundwater remediation. The Pilot Study provided useful information concerning a potential enhancement to the existing groundwater remediation system currently operating at the site. On May 12, 2005 EPA and MDE met with BFI to discuss the results of this pilot study. EPA and MDE were satisfied with the results of the pilot study and approved continuing with the next phase. The next phase will include an evaluation of an alternative extraction well, a revised monitoring program and the use of Hydrogen Release Compounds (HRC) at "hot spots". A work plan for the next phase should be submitted to EPA and MDE by July 15, 2005.

Site Description

The Solley Road facility was developed as a sanitary landfill in the early 1960s by Johnson and Speake, Inc., the former owners of the facility. In 1973, BFI purchased and utilized the facility until its closure in 1982. The facility consists of two closed landfills, the West Fill and the East Fill. The West Fill was used for municipal solid waste (household trash), while the East Fill was used for industrial hazardous waste. In the year 2000, Allied Wastes Systems purchased the property from BFI.

Site Responsibility

RCRA Corrective Action activities at this facility are being conducted under the direction of EPA Region 3 with assistance from the State.

Contaminants

The main contaminants are volatile organic compounds such as benzene (a component of gasoline) and trichloroethylene (a solvent).

Community Interaction

The BFI Solley Road facility is located in a rural area 3 miles south of Baltimore, Maryland. There are a number of residents located within 1/4 mile of the facility. Since 1991, EPA, the State of Maryland and the facility have held numerous formal and informal meetings with the public to address the clean up of the facility.

Institutional Controls

No Institutional Controls Implemented.

Government Contacts

EPA Project Manager
Mr. Denis M. Zielinski - 3WC23
U.S. Environmental Protection Agency - Region III
1650 Arch Street
Philadelphia, PA 19103-2029
Phone: (215) 814-3431
Email: zielinski.denis@epa.gov

Mr. James Leizear
Maryland Department of the Environment
1800 Washington Boulevard
Baltimore, MD 21230
Phone: (410) 537-3400
